

NewGen ESP

**Leap into the future with
KITTEC's new kiln lining**

With **NewGen ESP**, KITTEC offers a brand new generation of lining for your new kiln.

Our test shows: a **CB 95 S NewGen ESP** reached 1,250°C in 3 hours and saved a lot of electricity compared to the **CB 95 S ESP** (3.75 hours) and the **CB 95 S Standard** (4.25 hours).

For the **NewGen ESP** kiln option, we use a **novel type of foam ceramic brick**, thereby providing a range of advantages to future kiln owners:

- ✓ Ergonomic work due to lower overall kiln weight
- ✓ Faster work processes with shorter cycles due to quicker heating and cooling
- ✓ Shorter heating times save electricity

Experience now the additional benefits of the new KITTEC NewGen ESP:

- ✓ Longer service life of heating coils due to shortened heating times
- ✓ Easier transport and setup due to lower overall kiln weight
- ✓ Increased sustainability through local production of the foam ceramic bricks in Central Europe
- ✓ Resource-saving, 100% recyclable material that can be reused as a raw material for the production of new foam ceramic bricks

Safe to use -
no ceramic fibers
